Networks require effective working relat
and information sharing between many in
and groups—supporting exchange of res
sharing of tasks, and collective owners
outcomes is essential.
FOSTER CONNECTIONS
Mason bees are efficient pollinators creating connections across various species.
Network practitioners are adept at connecting people, institutions, ideas, and resources for mutual benefit and to create, grow, and sustain camman purpose.
Success looks like: long-term relationships develop that may result
collaborations
HONOR DIFFERENCE
Ravens are often found near hunting wolves and help them fi
prey. It is because of their differences that they both can eat
Every participant in a network brings specific skills, resources or perspectives AND has different capacity, work/leadership style, and language. Networks are strengthened by understanding and leveraging this diversity.
Success looks like: this manifests as individuals and their specific talents feeling seen as contributions to the network
There is a delicate balance between cleaner fish and apex predators like sharks.
HOLD TENSION
A skillful network practitioner—and a vibrant network—are able to identify, share, and hold tensions and contradictions within the group which, if navigated gracefully, can build strength.
Success looks like: not trying to attempt to reduce complexity and conflict but rather learning from and engaging them

Networks work best when all members operate from a network mindset, holding the whole network as a place of decision making. Equity and power analysis paired with engaging learning and leadership development are critical.
WHAT PITFALLS DO YOU ENVISION?
